IDENTIFIERS *British Columbia

ABSTRACT

This report provides province-wide information on the number and academic performance of students transferring from the community colleges and secondary schools in British Columbia (BC) to three BC universities (University of British Columbia, University of Victoria, and Simon Fraser University) between 1977 and 1984. Data for college transfer students are compared to data for direct-entry students (i.e., students entering the university directly from secondary schools). After chapters 1 to 3 provide an executive summary, introduction, and definitions of terms, chapter 4 presents detailed information on the flow of students from BC colleges and secondary schools to the three universities, showing the number of transfers during the 8-year period from each community college to each university and from schools in each college region to each university. Academic progress is examined in terms of continuing enrollment or withdrawal status, undergraduate degree attainment, and academic standing upon graduation. Chapter 5 deals with the current enrollment status of the transfer students, while chapter 6 explores the relationship between degree completion and grade point average upon entry to the university. Chapter 7 looks at withdrawal rates over time by university and program. Chapter 8 provides information on the specific degrees and degree majors attained by the graduates, exploring changes over time in the types of degrees and majors earned. Chapter 9 examines the final academic standing of students who have earned degrees. (Author/EJV)

CHAPTER 1

EXECUTIVE SUMMARY

This study provides information on the numbers of students transferring to university from the community colleges and secondary schools in B.C. during the period from 1977 to 1984. The report focuses on the academic progress of these students in terms of their continuing enrolment or withdraval status, their undergraduate degree attainment, and their final academic standing upon graduation. Data for College Transfer students are compared to data for Direct Entry students, i.e., students entering university directly from secondary schools.

The total number of college students transferring to the universities has increased substantially since 1977. There were 2,363 College Transfers in 1977, whereas by 1983 this had risen to 3,030. Although the number of College Transfers dropped in 1984 to 2,768, this was still 17% higher than the 1977 enrolment. College Transfer students represented nearly 26% of all first-time enrolments at the three universities.

The growth in the number of students going directly from secondary school to university was much lower. In 1977 there were 5,162 Direct Entry students enrolled at the universities. By 1983 this had grown to 5,698 but then fell back to 4,975 in 1984. Direct Entry students made up 53% of UBC's first-time enrolments in 1984, 49% of UVIC's, and only 34% of SFU's.

Approximately 84% of all College Transfer students and 82% of all Direct Entry students made their transfer to university immediately following their departure from either college or secondary school. College Transfer students with 1 year credit represented 63% of all College Transfers in 1984, up from the 56% of eight years earlier. The percentage of College Transfers with 2 years credit in 1984 was down to 22% from a level of 29% in 1977.

The transfer rate from the University Transfer programs in the colleges to the universities was approximately 14% during the 8 years from 1977 to 1984. The rate for Metropolitan colleges was typically 2% higher at 16%, whereas for Urban/Rural colleges it was 12% and for Remote colleges it was only 7%.

College Transfer students with 1 year credit had lower degree completion rates than College Transfers with 2 years credit at both UBC and UVIC. However at SFU, the pattern was reversed. College Transfer students with 1 year credit had higher degree completion rates. At all three universities, Total Direct Entry students had much lower completion rates than did Total College Transfer students. However, Direct Entry students after 1 year credit had higher rates

than College Transfers with 1 year credit. Similarly, Direct Entry students after 2 years credit had higher completion rates than College Transfers with 2 years credit.

College Transfers with 1 year credit from the Urban/Rural colleges had substantially higher degree completion rates than similar students from the other colleges at both UBC and UVIC. Okanagan College consistently had the highest rates at UBC and UVIC of any individual college, while Cariboo, Vancouver, and Camosun had the lovest values at UBC and Camosun, Vancouver, and Capilano had the lovest rates at UVIC. For College Transfers with 2 years credit, Cariboo, Okanagan, Capilano, and Douglas had the highest degree completion rates at UBC and Okanagan had the highest rates at UVIC. Camosun had the lovest rates at UVIC.

The pattern was different at SFU. The Metropolitan colleges had higher rates than other colleges for College Transfers with 1 or 2 years credit. Okanagan had one of the lover completion rates at SFU, while Vancouver and Camosun had some of the higher rates at SFU.

Direct Entry students from the Metropolitan regions had higher completion rates than from other regions at both UBC and UVIC. This pattern did not hold at SFU. At all three universities, regional differences decreased as the Direct Entry students gained experience at the university.

There was very little difference in degree completion rates at UBC for males and females. At UVIC, however, males had slightly higher completion rates. At SFU, males had substantially higher completion rates than females (54% compared to 44%, for example). However, for Direct Entry students a reverse pattern was evident at SFU. Females had slightly higher degree completion rates than males.

There was a strong positive relationship between GPA upon entry at UBC and degree completion rates for College Transfer students. Those who entered with high GPA's had higher completion rates than those who entered with low GPA's. Unfortunately, the GPA's Upon Entry for College Transfer students were not available at UVIC and SFU. However, at all three universities there was a similar strong positive relationship between High School GPA's upon entry for Direct Entry students and degree completion rates. Completion rates were higher for those who entered with a high GPA than those having a low GPA.

Since High School GPA information was not available for College Transfer students at any of the universities, it was not possible to examine whether the higher completion rates for Direct Entry students, compared to College Transfers, were related to differences in the students' academic standings following Grade 12. Given the strong relationships observed between GPA Upon Entry and degree completion, it is important for such analyses to be extended so that they are based on High School GPA's for <u>both</u> groups of students.

Higher percentages of College Transfers with 1 year credit withdrew each successive year at UBC than for College Transfers with 2 years credit. This same pattern was evident at UVIC. However, at SFU the withdrawal rates for College Transfers with 1 year credit were LOWER than for those with 2 years credit. The 3-year Cumulative Total withdrawal rate for College Transfers with 1 year credit was higher than for those with 2 years credit at both UBC and UVIC. For SFU the reverse was true.

For Total Direct Entry students, the withdrawal rates were always higher than for Total College Transfers, at all three universities. However, for Direct Entry students after they had attained 1 or 2 years credit, the withdrawal rates were substantially lower than for College Transfers with 1 or 2 years credit. This held true at all three universities.

Industrial Education had the highest 3-year Cumulative Total withdrawal rates for College Transfer students with 1 year credit at UBC, although this was based on a fairly small number of students. Dental Hygiene, Elementary Education, and Applied Science had the lowest withdrawal rates. Most withdrawals occurred after one year at university. Withdrawal rates for Direct Entry students were very high in Industrial Education, Occasional Education and Native Indian Teacher Education. Most Direct Entry students in these faculties did not continue beyond one year in the program. Medicine, Law and Applied Science had the lowest withdrawal rates.

The withdrawal pattern at UVIC was much more erratic than at UBC. Fine Arts had the highest 3-year cumulative total withdrawal rate for College Transfers with 1 year credit but the lowest rate for those with 2 years credit. Education had high withdrawal rates for some cohorts of College Transfer students but low rates for other cohorts. The withdrawal rates for Direct Entry students at UVIC were more stable, with little variation among the four main UVIC faculties.

At SFU the highest withdrawal rates occurred in the Education faculty for both College Transfers and Direct Entry students. There was not much variation in withdrawal rates among the other SFU faculties.

B.Sc. and B.A.Sc. degrees were more frequent among Direct Entry students than College Transfer students, while B.Ed. degrees were more frequent among the College Transfers. This was true for all three universities. In addition, at SFU there was a higher percentage of Direct Entry students completing B.B.A. degrees than College Transfers.

For Direct Entry students at UBC, there were slightly higher percentages obtaining 1st class standings and lower percentages with Pass standings than observed for College Transfers. The distribution of grades for College Transfer students at UVIC was quite erratic from cohort to cohort, compared to that observed for Direct Entry students at UVIC. Other than this, there didn't appear to be much difference between the two groups in the percentages of 1st class standings and Pass standings achieved. At SFU, substantially higher percentages of College Transfers with 2 years credit had 1st class standings, compared to those with 1 year credit. There were corresponding lower percentages having Pass standings. Direct Entry students had slightly higher percentages with 1st class and 2nd class standings than College Transfers with 1 year credit, but not as high as for College Transfers with 2 years credit.

CHAPTER 2

INTRODUCTION

This report is a continuation of the series of studies entitled "The British Columbia Colleges Articulation Study". These studies were first implemented in 1973 to provide data on the academic achievement of community college students after transfer from college to university. The series began with the reporting of session results for students transferring to the University of British Columbia in 1973. It was then gradually extended, in subsequent years, to include results for college transfers to all three provincial universities. Annual reports of session results were provided during the period from 1973 to 1981.

In 1979, the series was again extended to include an analysis of university degree completion rates by College Transfer students enrolled at UBC. Degree completion studies at the University of Victoria and at Simon Fraser University were conducted in 1980. The series was then updated in 1981.

In 1982, however, the Degree Completion studies came to a temporary halt due to a lack of funding. With the publication of this report it is hoped that periodic assessment of degree completion rates has once again been resumed.

These University Degree Completion reports provide information on the numbers of students transferring to university and the academic progress of these students in terms of their continuing enrolment or withdrawal status, their undergraduate degree attainment, and their final academic standing upon graduation. Thus, the reports provide key management data concerning the Academic programs in the colleges.

The reports also provide information on the numbers and subsequent performance of students entering the university directly from secondary school. These students are referred to as "Direct Entry" students. They are included for two principal reasons:

- to provide monitoring of the students entering university from the secondary school system;
- to provide a reference group of students for comparison with the "College Transfer" students.

On this latter point, the reader must be cautioned, however, not to carry such comparisons too far. "College Transfer" students and "Direct Entry" students are not strictly comparable groups of students. Previous research* (albeit from many years ago) showed that many of the College Transfer students would not have been able to enter university directly from secondary school. There were a variety of reasons for their ineligibility. However, the predominant factor was that these students often had inadequate achievement levels in their secondary school courses. Thus, many of the College Transfer students were only able to gain entry to the university as a result of their college-level work. It is not known whether this same situation prevails today, but it suggests that the pool of College Transfer students may differ academically from the pool of Direct Entry students.

This report provides information primarily at the provincial level. Separate Appendix reports are available to provide detailed information for each individual college of transfer. In reading all reports, the user is advised to begin by carefully revieving the definitions provided in Chapter 3 of this report.

Chapter 4 provides detailed information on the flow of students from B.C. colleges and secondary schools to the three universities. It shows the number of transfers over the last 8 years from each college to each university and from schools in each college region to each university. The chapter also shows which faculties these students have entered when enrolling at the university and explores variations in those enrolments.

Chapter 5 deals with the current enrolment status of these transfer students. Since the study begins with students who transferred in 1977, most of these students have either completed their studies or withdrawn. Thus, there are good measures available of ultimate degree completion rates for the various groups of students. Variation in rates are explored by college and college region, by faculty, by year level of entry to university, and by sex.

Chapter 6 explores the relationship between degree completion and grade point average upon entry to university. Chapter 7 then looks at withdraval rates over time by university and faculty.

Chapter 8 provides information concerning the specific degrees and degree majors attained by the students who have graduated. It explores changes over time and patterns in the types of degrees and majors earned. Chapter 9 examines the final academic standing of students who have earned degrees.

CHAPTER 3

DEFINITION OF TERMS

3.1 DATA INCLUDED

This University Degree Completion report examines the academic performance of undergraduate students (not having a prior university degree) who were enrolled for credit at the three public, provincial universities in British Columbia, namely:

- University of British Columbia (UBC)
- University of Victoria (UVIC)
- Simon Fraser University (SFU)

The data reported cover students entering the university for the first time in the years from 1977 to 1984 inclusive. For UBC and UVIC, the September intake of students is considered. The summer session intake at UBC and UVIC, and the inter-session at UBC, are not included since there are so few students enrolling at these times. For SFU, which operates on the tri-semester system, the intake during all three semesters are included: Fall, Spring and Summer.

Graduation data extends to December 31, 1985, (i.e. degree requirements were met on or before December 1985).

3.2 STUDENT REPORTING CATEGORIES

Throughout the tables in this report students are divided into six groups for the purpose or reporting enrolment counts and degree completion results:

College Transfer Students

Students transferring to the university having previously attended a community college in B.C. and having earned at least one unit of university equivalent credit prior to enrolling in the university:

1. College Transfers With 1 Yr Univ. Equiv. Credit - students who transfer to university with academic credit equivalent to one year of university study (but less than 2 years). Note that one year equivalent credit is defined at both UBC and UVIC as 12 to 26 units of transferable credit. At SFU, the student must have completed 30 to 59 semester hours of transferable academic credit.

2. College Transfers With 2 Yr Univ. Equiv. Credit - students who transfer to university with academic credit equivalent to two or more years of university study. Note that two or more years equivalent credit is defined at both UBC and UVIC as 27 or more units of transferable credit. At SFU, the student must have completed 60 or more semester hours of transferable academic credit.

3. Total College Transfers - all College Transfer students, including those transferring with LESS than the equivalent of one year's university study.

Direct Entry Students

Students entering the university who have previously completed Grade 12 at a secondary school in B.C. and who have NOT earned any university equivalent credit prior to enrolling in the university:

4. Total Direct Entry Students - all Direct Entry students;

5. Direct Entry Students After 1 Yr University Credit - students who have successfully completed the equivalent of at least one year of university study. One year is defined at UBC and UVIC as 12 units of credit. At SFU, it is defined as 30 semester hours of credit;

6. Direct Entry Students After 2 Yr University Credit - students who have successfully completed the equivalent of at least two years of study at university. Two years credit is defined at UBC and UVIC as 27 units of credit. At SFU, it is defined as 60 semester hours of credit.

Note that the latter two groups of Direct Entry students are similar to the first two groups of College Transfer students. They have both achieved equivalent levels of university credit. The Direct Entry students completed their work at the university, while the College Transfer students did this at a B.C. college prior to transferring to university.

3.3 ENROLMENT STATISTICS

Tables 1 and 2 in Appendix A provide enrolment information for the various categories of students described above during the period from 1977 to 1984. The term Cohort is used in the tables to refer to a specific group of students entering the university at the same point in time. For example, the 1980 cohort refers to that group first enrolling in the 1980/81 academic year.

The term Specific Entry Year refers to the particular academic year when the students first enrolled in the university. A Specific Entry Year of 1984 at UBC or UVIC means the 1984/85 academic year, the intake being September 1984. In the case of Simon Fraser University, the Fall 1984, Spring 1985 and Summer 1985 semesters are all included under the heading of Specific Entry Year 1984.

The Number Entering refers to the total number of students in a particular cohort who entered the university. It is the total number starting, regardless of which particular degree program they eventually pursue and regardless of whether or not they ever complete a degree.

In Table 1, of Appendix A, students transferring to university are also reported according to the amount of time delay in their transfer:

Immediate - The term Immediate College Transfer is applied to students entering the university during the academic year immediately following their studies at college. Similarly, the label Immediate Direct Entry is applied to students entering the university in the academic year immediately following their graduation from secondary school. Note that for transfers to SFU, immediately following academic year refers to the subsequent Fall, Spring or Summer semester. For example, if a student graduates from secondary school in June 1980 and then enters SFU in January 1981, he/she is considered an Immediate Direct Entry student.

Delayed - Two categories of delayed transfers are used. Those labelled 1 Year Delay have been out of college or secondary school for one year prior to transferring to university. For example, a student graduating from secondary school in June 1980 and not entering the university until September 1981 (Fall 1981, Spring 1982 or Summer 1982 in the case of SFU) would be considered a Direct Entry Student having a "1 Year Delay".

- The second category of delayed transfers includes those with More than 1 Year Delay. These students have been out of school for longer than one year. In the above example of a June 1980 secondary school graduate, this student would be included in the group "More than 1 Year Delay" if he/she did not enter the university until September 1982 or later.

Enrolments by Faculty of Entry are detailed in Table 2 of Appendix A. This is the university faculty in which the student first enrolled. At SFU students are admitted to the university as a whole, not to a particular faculty. Thus, the "Faculty of Entry" refers to the faculty indicated by the student during his/her initial enrolment. Where a student subsequently switches faculties, degree attainment is still recorded under the first faculty in which the student enrolled. An explanation of faculty codes is provided in Appendix B.

3.4 REPORTING BY COLLEGE AND COLLEGE REGION

Detailed information on enrolments and degree completion results are provided by individual college of transfer in separate Appendix Reports. In these documents, College Transfer students are reported according to the B.C. College which they attended (as recorded by the students on their university application form). If students have attended more than one college, they have been reported under the college at which most of their university equivalent credit was earned. Table 3, in Appendix A, includes summary information by college of transfer. However, in all the other tables College Transfer students are reported as a total group.

In a similar way, the separate Appendix Reports provide results for Direct Entry students according to the College Region in which they completed their Grade 12 studies. That is, the Direct Entry students are reported by the region in which their previous B.C. secondary school is located (as recorded by the students on

their university application form). Where the specific secondary school was not reported, the student's region is listed as "Unknown". Table 3, in Appendix A, provides summary information for Direct Entry students by college region. The remaining tables deal with Direct Entry students as a total group.

Colleges and College Regions are also grouped into three regional categories in Table 3 to provide somewhat larger geographic groupings for comparative purposes:

> Remote Colleges - the school districts making up these college regions all have relatively small populations, usually scattered in small communities, and are all quite remote from the Lower Mainland;
>
> Urban/Rural Colleges - the school districts making up these college regions are either located in the interior of the province or on Vancouver Island. They generally include communities which are moderate in size, and are located closer to the Lower Mainland than those in the Remote Colleges category. Typically they include a mixture of urban and rural communities;
>
> Metropolitan Colleges - the school districts making up these college regions are all large metropolitan communities.

A list of the 15 B.C. colleges and definitions of the college regions, in terms of component school districts, are provided in Figure I. This list also indicates the specific makeup of the three regional categories. The geographic location of the individual school districts is illustrated in Figure II.

3.5 ENROLMENT STATUS AS OF JANUARY 1986

Tables 3 through 7, in Appendix A, report the Enrolment Status of each student as of January 1986 (i.e., up to and including 1985/86 registrations and the 1985 Convocation ceremonies). There are three categories considered:

> Graduated - All requirements for an undergraduate degree have been met on or before December 31, 1985;
>
> Withdrawn - No degree has been awarded yet and the student had not re-enrolled as of the 1985/86 academic year. In the case of SFU, the student had not re-enrolled in either the Fall 1985 or Spring 1986 semester.
>
> Still Enrolled - No degree had been awarded yet but the student was still enrolled as of the 1985/86 academic year. In the case of SFU, the student was enrolled in either the Fall 1985 or Spring 1986 semester. It is possible that some or all of these students may eventually complete a degree.

Figure I
COLLEGES AND COLLEGE REGIONS

REGIONAL CATEGORY		COLLEGE	COLLEGE REGION (COMPONENT SCHOOL DISTRICTS)
REMOTE COLLEGES			
	EKC	East Kootenay College	1, 2, 3, 4, 18, 86*
	NI	North Island College	49, 70, 71, 72, 84, 85
	NL	Northern Lights College	59, 60, 81, 87
	NW	Northwest College	50, 52, 54, 80, 88, 92
	SELK	Selkirk College	7, 9, 10, 11, 12, 13, 86*
URBAN/RURAL COLLEGES			
	CAR	Cariboo College	24, 26, 27, 29, 30, 31

SCHOOL DISTRICTS

B.C. RESEARCH

The university year level at which the student first enrolled is also used for reporting purposes in Table 5. This is referred to as the Entry Year Level. It is based on the number of units or semester credit hours of university equivalent credit held by the student upon entry to the university. It should be noted that this Entry Year Level sometimes differs from a student's level within his/her faculty. In the Faculty of Arts at UBC, for example, an Entry Year Level of 1 is equivalent to first year Arts. A student entering at this level has not yet completed 12 units credit transferable to UBC or to UVIC, or 30 semester hours credit transferable to SFU. However, in a faculty like Law at UBC, an Entry Year Level of 4 would be equivalent to first year Law.

3.6 ENROLMENT STATUS COMPARED TO GPA UPON ENTRY

As stated earlier, the pool of College Transfer students is likely to differ academically from the pool of Direct Entry students. To help control for these differences, the student's GPA Upon Entry is reported in Table 7. This is derived, by the university, from the student's overall Grade Point Average upon admission to the university, based on either his/her previous college work or secondary school work. The GPA Upon Entry is defined as follows:

Figure III
GPA UPON ENTRY

GPA UPON ENTRY	LETTER GRADE	PERCENTAGE EQUIVALENT
3.8 - 4.0	A	86% or better
3.2 - 3.7	B	73% - 85%
2.6 - 3.1	C+	67% - 72%
2.0 - 2.5	C	60% - 66%
0.0 - 1.9	P/F	Less than 60%

For College Transfer Students, the GPA Upon Entry is a 4-point scale based on selected post-secondary courses (if the student has a significant number of units of transferable credit) OR it is based on selected Grade 11 and 12 courses.

For Direct Entry Students, the GPA Upon Entry is a 4-point scale based on selected Grade 11 and 12 courses.

3.7 WITHDRAWAL RATES

Special consideration is given in Table 8, of Appendix A, to the examination of Withdrawal Rates. These are tabulated at the end of each year of university study (for the first three years) and then a "Cumulative Total Withdrawal Rate" is also calculated:

> After 1 Year - The number of students entering the university is compared with the number of degree conferrals and enrolment registrations in the immediately following or "second" academic year. The percentage of students who have neither graduated or enrolled during that second academic year is reported as the Withdrawal Rate After 1 Year.
>
> After 2 Years - Similarly, the number who were STILL enrolled during the "second" academic year is compared with the number of degree conferrals and enrolment registrations in the immediately following or "third" academic year. The percentage of students who have neither graduated or enrolled during that "third" academic year is reported as the Withdrawal Rate After 2 Years.
>
> After 3 Years - The process is repeated once more, comparing the number STILL enrolled during the "third" academic year with the number of degree conferrals and enrolment registrations in the immediately following academic year. The percentage of students who have neither graduated or enrolled in that "fourth" academic year is reported as the Withdrawal Rate After 3 Years.
>
> Cumulative Total - Students who withdraw from studies may subsequently re-enrol at a later time. Such re-enrolments are not taken into account in the individual withdrawal rates calculated above. Therefore, a cumulative total or net withdrawal rate is also calculated. This is done by comparing the number of students originally entering the university with the number of degree conferrals and enrolment registrations four years later. The percentage of students who have not graduated within the first three years and who are not enrolled in the next ("fourth") academic year are reported as the Cumulative Total Withdrawal Rate.

The calculation of Withdrawal Rates is somewhat more complex when applied to Direct Entry students. To assist in understanding the concepts in this situation, a few specific examples are helpful. Consider the case of Direct Entry students entering the university in September 1980 and subsequently accumulating enough credits at the university to progress beyond the First Year level and then beyond the Second Year level. Such students will gradually move through the three categories of Direct Entry students described earlier. The calculation of Withdrawal Rates for each of these categories is carried out as follows:

Example 1. Direct Entry student beginning September 1980:

Withdrawn After 1 Year	= did not re-enrol in 1981/82 and had not completed a degree by Dec, 1981.
Withdrawn After 2 Years	= enrolled during both 1980/81 and 1981/82, did not re-enrol in 1982/83, and had not completed a degree by Dec, 1982.
Withdrawn After 3 Years	= enrolled during 1980/81 through 1982/83, did not re-enrol in 1983/84, and had not completed a degree by Dec, 1983.
Cumulative Withdraval	= Students are counted in the Cumulative Withdraval rate if they did not re-enrol in 1983/84 and had not completed a degree by Dec, 1983.

Example 2. Direct Entry student beginning September 1980 but considered After 1 Yr Univ.Credit:

Withdrawn After 1 Year	- enrolled during 1980/81 and 1981/82, did not re-enrol in 1982/83, and had not completed a degree by Dec, 1982.
Withdrawn After 2 Years	- enrolled during 1980/81 through 1982/83, did not re-enrol in 1983/84, and had not completed a degree by Dec, 1983.
Withdrawn After 3 Years	- enrolled during 1980/81 through 1983/84, did not re-enrol in 1984/85, and had not completed a degree by Dec, 1984.
Cumulative Withdrawal	- Students are counted in the Cumulative Withdrawal rate if they did not re-enrol in 1984/85 and had not completed a degree by Dec, 1984.

Example 3. Direct Entry student beginning September 1980 but considered After 2 Yr Univ.Credit:

Withdrawn After 1 Year - enrolled during 1980/81 through 1982/83, did not re-enrol in 1983/84, and had not completed a degree by Dec, 1983.

Withdrawn After 2 Years - enrolled during 1980/81 through 1983/84, did not re-enrol in 1984/85, and had not completed a degree by Dec, 1984.

Withdrawn After 3 Years - enrolled during 1980/81 through 1984/85, did not re-enrol in 1985/86, and had not completed a degree by Dec, 1985.

Cumulative Withdrawal - Students are counted in the Cumulative Withdrawal rate if they did not re-enrol in 1985/86 and had not completed a degree by Dec, 1985.

As can be seen from these examples, the calculation of Withdrawal Rate changes as it is applied to the category "Direct Entry After 1 Yr Univ. Credit" and then changes again as it is applied to the category "Direct Entry After 2 Yr Univ. Credit". The intent in these situations is to report withdrawal statistics for successive years after the students have had one or two year's university experience respectively. Thus, the Direct Entry student groups are reasonably comparable to the College Transfer students who have completed 1 or 2 years university equivalent credit while at college.

Finally, it should be noted that Direct Entry students who do NOT accumulate sufficient credit to proceed beyond the First Year level are never included in the second or third categories of Direct Entry students. Therefore, such students are not considered in the Withdrawal Rates for these two categories.

3.8 DEGREES AND DEGREE MAJORS

In Tables 9 and 10, of Appendix A, the completion of undergraduate degrees is tabulated as of January 1986 at two levels respectively, the Degree and the Degree Major. These terms are explained below:

Final Degree - The particular degree obtained by the student. Examples would be a B.A., B.Sc., or a B.Ed. A full list of degree codes is presented in Appendix C.

Final Degree Major - The particular area of specialization in which the student obtained his/her degree. The degree major codes quoted are actually university departments. A full list of department codes is provided in Appendix D. These are reported using both the code and full name of the department. For example, 290 ENGLISH, 430 HISTORY, or 830 POLITICAL SCIENCE. Double majors are also considered. In these cases, statistics are reported under two department headings, for example 150 CHEM/570 MATH or 290 ENGL/515 LANG. Where no major has been indicated on a student's record, statistics are tabulated under the degree code together with the degree name.

3.9 FINAL ACADEMIC STANDINGS

In Table 11, of Appendix A, final Academic Standings are reported for those students who have received degrees. These are displayed as a % frequency distribution across the following categories:

Figure IV
GRADE POINT PROFILE

Grade Point Profile	Definition
1	First Class Grade
2	Second Class Grade
P	Pass Grade
OTHR	Other classifications, including: credit/standing withheld, credit granted in courses passed, required to withdraw from faculty, credit granted on partial program, deferred granted, and standing not known.

See Table Figure V for the definition used at each university.

CHAPTER 4

ENROLMENTS IN UNIVERSITIES

4.1 FIRST-TIME ENROLMENTS BY SEX & BY PREVIOUS INSTITUTION TYPE (TABLE 1)

Table 1, in Appendix A, provides statistics on the numbers of College Transfer students and Direct Entry students who have transferred each year to the B.C. universities. The table is in three parts, Part I presents statistics for both sexes combined, while parts II and III deal separately with males and females respectively.

Each part of Table 1 consists of three pages. The first page examines the numbers of students transferring to each university while the second page expresses these numbers as a percentage of Total College Transfers and the Total University enrolment for the corresponding year.

The third page of Table 1 examines whether or not students have transferred immediately to university from college or secondary school or whether they delayed their transfer by one or more years.

The total number of college students transferring to the universities has increased substantially since 1977. There were 2,363 College Transfers in 1977, whereas by 1983 this had risen to 3,030 (an average annual growth rate of 4.7%). During this same period there was a 4.9% increase in enrolments in the University Transfer programs in the B.C. colleges*. While the number of College Transfers dropped in 1984 to 2,768, this was still 17% higher than the 1977 enrolment. College Transfer students represented almost 26% of all first-time enrolments at the three universities. This varied by university, with UBC and UVIC having 23% of their first-time enrolments as College Transfers while SFU had 31%.

Most of the growth during this period occurred at UVIC and SFU. The number of College Transfers at UBC generally remained in the 1,000 to 1,100 level throughout the eight years. UVIC, on the other hand, increased from 358 students to 595 while enrolment at SFU went from 852 College Transfer students to 1,033.

---

* University Transfer program enrolments in the B.C. colleges rose from 16,025 in 1976/77 to 20,768 in 1982/83. B.C. Post-Secondary Enrolment Statistics; Victoria: Ministry of Education, 1978/79 (Tables 12 to 31) and 1983/84 (Table 11).

The overall growth in the number of College Transfer students was primarily the result of an increase in the number of students transferring with 1 year of university equivalent credit. Such College Transfer students represented 63% of all College Transfers in 1984, up from 56% of eight years earlier. The percentage of College Transfers with 2 years credit in 1984 was down to 22% from a level of 29% in 1977.

Up to and including 1983, the growth in the number of students going directly from secondary school to university had been much lower. In 1977 there were 5,162 Direct Entry students enrolled at the universities. By 1983 this had grown to 5,698 (an average annual growth rate of only 1.7%). The corresponding growth rate in the size of the B.C. Grade 12 enrolment was only 0.2%*. In 1984 the number of Direct Entry students dropped substantially to 4,975. There was NOT a corresponding sharp decline in the number of Grade 12 students from September 1982 to September 1983. Direct Entry students made up 53% of UBC's first-time enrolments, 49% of UVIC's, and only 34% of SFU's in 1984.

Regarding the timing of transfer, approximately 84% of all College Transfer students made their transfer to university immediately following their departure from college. This percentage did not change significantly over the eight years from 1977 to 1984. About 8% of the students delayed their transfer by 1 year and 7% delayed by more than 1 year.

The distribution was roughly the same for Direct Entry students. Nearly 82% went directly from secondary school to university, 6% delayed by 1 year and 12% delayed by more than one year. The distribution for Direct Entry students also did not change significantly over the eight years.

Males made up approximately 55% of all College Transfers with 1 year university equivalent credit, 48% of those with 2 years credit, and only 45% of those having less than 1 year credit. Direct Entry students were almost always divided 49% males and 51% females.

4.2 TRANSFER RATES BY COLLEGE

Figure VI, on the next page, shows the transfer rate to university for Total College Transfer students. The percentages have been calculated by comparing the first-time enrolment of Total College Transfer students in all three universities with the total enrolment in the University Transfer programs in the colleges during the preceeding academic year.

This calculation assumes that all transfers occurred in the immediately following year. In the previous section it was observed that only 84% of the College Transfer students came directly from college, while the remaining 16% delayed their transfer by one or more years. Thus, comparing the number of students entering university in one year with only the previous year's college enrolment is not correct. Nevertheless, it is believed that this simplified approach provides reasonable estimates of the actual transfer rates. Since, the

---

* Grade 12 enrolments in the B.C. public schools rose from 35,919 in September 1976 to 36,387 in September 1982. B.C. Public School System September Enrolment Projections; Victoria: Ministry of Education, July 1985.

84% figure had not changed much over the 8 year period under study, errors due to delayed transfers have probably offset one another, leaving a good reflection of transfer rates.

Figure VI
ESTIMATED TRANSFER RATES* BY COLLEGE

SUB-TOTAL	17.9	15.3	15.2	15.5	16.2	16.9	16.3	13.9
PROVINCIAL TOTAL	14.8	13.2	12.8	13.1	13.6	14.4	14.6	13.2

*NOTE: First-time enrolment of Total College Transfers expressed as a percentage of total University Transfer program enrolment in the college during the preceeding academic year.
Data Source: B.C. Post-Secondary Enrolment Statistics; Victoria: Ministry of Education, 1978/79 to 1984/85 (Table 11).

Figure VI shows that the total provincial transfer rate varied above and below a value of approximately 14% during the 8 years from 1977 to 1984. The transfer rate for the Metropolitan colleges was usually 2% higher, at approximately 16%. The Urban/Rural colleges had a rate of about 12%, while the rate for the Remote colleges was only 7%, and it would have been lower than this except for the presence of Selkirk College in this group.

The transfer rates from each Remote college except Selkirk generally increased from 1977 to 1984. North Island had the lovest rate at only 2.6%. The transfer rates for Selkirk vere quite erratic, having a lov of 13.3% in 1979 and a high of 23.9% in 1982. They have since fallen to the 18% to 19% range. For most of the colleges either 1982 or 1983 was a high point in transfer rates. Then, for unknown reason, transfer rates fell at ten of the fifteen colleges in 1984. The five exceptions were East Kootenay, North Island, Northern Lights, Northwest and Malaspina.

4.3 FIRST-TIME ENROLMENTS BY FACULTY OF ENTRY (TABLE 2)

Table 2, in Appendix A, shows the faculties selected by students transferring from the colleges as compared to those selected by students coming directly from secondary schools.

It must be remembered that not all faculties are accessible to students coming directly from Grade 12. Some faculties, such as Applied Science and Commerce at UBC, require at least one year of university study prior to admission to the faculty. Thus, one would expect to see differences in the selection patterns when comparing Total Direct Entry students to College Transfers having 1 Year or 2 years university equivalent credit. Therefore, it is more appropriate to compare College Transfer students with 1 year credit to Direct Entry students AFTER they have completed 1 year at university.

Figure VII, on the next page, summarizes the first-time enrolment data from Table 2 by area of study. It shows a comparison between College Transfer students with 1 year university equivalent credit and Direct Entry students after attaining 1 year of university credit. The percentage of College Transfers who selected Commerce at UBC dropped from 15% in 1977 to only 6% in 1983. A detailed examination of Table 2 in Appendix A shows that this is a reflection of a steady decline in the percentages of College Transfer students selecting Commerce during this period. There was a corresponding increase in the percentages entering Arts, but little change in the other figures.

For Direct Entry students at UBC, there were shifts away from Education and Science areas and into Arts. The percentage who selected Arts increased from 36% in 1977 to 52% in 1983.

Comparing the College Transfers with the Direct Entry students at UBC, it can be seen that higher percentages of College Transfers selected Education and lover percentages selected Arts and Science.

The opposite happened at SFU. With the introduction of the Faculty of Business in 1982 at SFU, College Transfer students began to select this area of study. Consequently, the percentage changed from 0% in 1977 to 23% in 1983. There was also an increase in the percentage of College Transfers who selected Independent Studies at SFU (listed under the heading "Other" in Figure VII). This percentage increased steadily from 11% in 1977, reaching 17% in 1983. There were offsetting declines in the percentages choosing Education and Arts at SFU.

Figure VII
FIRST-TIME ENROLMENTS BY AREA OF STUDY*
1977 COMPARED TO 1983

	1983	12%	11%	37%	23%	-	17%
DIRECT ENTRY AFTER							
1 YR CREDIT	1977	10%	21%	62%	0%	-	7%
	1983	12%	29%	32%	13%	-	14%

* NOTE: Educ. = Education and includes Physical Education, Native Indian Teacher Educ., & Recreational Educ. at UBC.
Scie. = Science and includes Family and Nutrition, Agriculture, Nursing, Forestry, Pharmacy, and Applied Science at UBC and Engineering and Applied Science at UVIC.
Arts = Arts and includes Music and Fine Arts at UBC and Human & Social Development at UVIC. Note that for UVIC the Arts and Science categories are combined.
Comm. = Commerce and includes Business at SFU.
Prof. = Professions which includes Law, Architecture, Medical Residents, Medicine and Dentistry at UBC and Law at UVIC.
Oth. = Other which includes all other faculties.

Direct Entry students at SFU also began to select the Business area in 1982, with the percentage moving from 0% to 13% by 1983. There was a similar increase in the number who selected Independent Study, with the percentage moving from 7% to 14%. There was an offsetting drop in the percentage who selected Arts (62% to 32%).

Comparing College Transfers to Direct Entry students at SFU, it can be seen that a higher percentage of College Transfers selected Business and Independent study, and a lower percentage selected Science and Arts, similar to the trend observed for UBC.

While it was impossible to split UVIC's Arts & Science enrolment into the two separate areas, it can be seen that there was a significant shift of College Transfer students from Education to Arts & Science during the period from 1977 to 1983. There was NOT a corresponding shift in the Direct Entry enrolments. Comparing College Transfer and Direct Entry enrolments, the percentage of College Transfers at UVIC who selected Education was considerably higher than for Direct Entry students. This is the same pattern as observed for UBC.

CHAPTER 5

ENROLMENT STATUS AS OF JANUARY 1986

5.1 ENROLMENT STATUS BY COLLEGE/COLLEGE REGION OF TRANSFER (TABLE 3)

Table 3, in Appendix A, provides the current enrolment status of each cohort of College Transfers from the individual colleges and of each cohort of Direct Entry students from the individual College Regions. Table 3A deals with students at UBC, Table 3B deals with students at UVIC and Table 3C deals with students at SFU. In each of these tables, Part I reports on College Transfers while Part II covers Direct Entry students.

Starting with Table 3A Part I (UBC), it can be seen that College Transfer students with 1 year credit had lower degree completion rates than College Transfers with 2 years credit (64% compared to 76%)*. This pattern held true at all colleges except New Caledonia.

College Transfers with 1 year credit from the Urban/Rural colleges had substantially higher degree completion rates at UBC than similar students from the other colleges. Their completion rates were typically 69%, while rates for the Metropolitan colleges were 63% and for the Remote colleges were 62%. Okanagan College consistently had the highest rates at UBC of any individual college (approximately 73%), while Cariboo, Vancouver, and Camosun had the lowest values (roughly 66%, 61% and 47% respectively). Although completion rates from the Remote colleges were even lower than these last three values, the numbers of students from individual colleges were too small to draw meaningful comparisons.

For College Transfers with 2 years credit, the pattern was different. Cariboo, Okanagan, Capilano, and Douglas had the highest degree completion rates at UBC with each having cohorts from three years exceeding a level of 80% completion.

Moving to Table 3A Part II, it can be seen that Total Direct Entry students at

---

*Note: throughout this and subsequent chapters, degree completion rate comparisons have been made on the basis of an average of the degree completion rates achieved by the 1977, 1978 and 1979 cohorts. More than one cohort was used in order to increase sample size and to make sure that observations were not peculiar to one year's data. Only the first three cohorts were used in order to insure that the completion rates were as high as they were likely to get (i.e., virtually no students from these cohorts were still enrolled as of January 1986).

UBC had much lover completion rates (56%) than did Total College Transfer students (66%). However, completion rates were higher for Direct Entry students after they had attained 1 or 2 years credit. Direct Entry students after 1 year had 72% degree completion at UBC compared to only 64% for College Transfers with 1 year credit. Similarly, Direct Entry students after 2 years credit had an 84% completion rate compared to only 76% for College Transfers with 2 years credit.

The Direct Entry students from the Metropolitan regions had the highest completion rates, across all three groups of Direct Entry students, although this regional difference decreased as the students gained more experience at UBC. The rates for Total Direct Entry students were approximately 58% from Metropolitan regions, 49% from Urban/Rural regions and 45% from Remote regions. For Direct Entry students after 1 year credit the corresponding figures were 74% Metropolitan, 69% Urban/Rural, and 65% Remote. For Direct Entry students after 2 years the figures were 85% Metropolitan, 82% Urban/Rural, and 78% Remote.

On an individual College Region basis, Total Direct Entry students from the Vancouver region had the highest completion rates (62%) while students from the Northwest region had the lovest (34%). This same pattern also held for Direct Entry students after 1 year credit (Vancouver highest with 76% and Northwest lovest with 56%) and for Direct Entry students after 2 years (Vancouver highest at 87% and Northwest lovest at 69%).

Turning nov to UVIC, Table 3B Part I, College Transfers from the Urban/Rural colleges again had the highest completion rates, as they did at UBC, but this time for both 1 year and 2 year College Transfer students. The completion rates for College Transfers with 1 year credit at UVIC were 57% Urban/Rural compared to 49% Remote and 45% Metropolitan. The rates for those with 2 years credit were 68% Urban/Rural, 67% Remote and 63% Metropolitan. It is also clear that College Transfers with 2 years credit, from all regions, had substantially higher completion rates at UVIC than those with only 1 year credit.

For College Transfers with 1 year credit, Okanagan had the highest rate (65%) at UVIC, as they did at UBC, while Camosun, Vancouver and Capilano had the lovest rates with 44%, 43% and 38% respectively. For those with 2 years credit Okanagan had the highest rate at UVIC with 81% and Camosun the lowest with 57%.

From Part II of Table 3B it can be seen that Total Direct Entry students at UVIC had a lower completion rate (35%) than Total College Transfers (50%). However, after the Direct Entry students had attained 1 year credit, this pattern reversed itself, just as it did at UBC. Direct Entry students after 1 year credit had a higher completion rate at UVIC (56%) than College Transfers with 1 year credit (50%). Similarly, Direct Entry students after 2 years credit had a higher rate (77%) than College Transfers with 2 years credit (66%).

On a regional basis, the same pattern as that observed at UBC was also evident at UVIC. Direct Entry students from the Metropolitan regions had higher completion rates at UVIC (38%) than from other regions (Urban/Rural 34% and Remote 31%). The pattern was the same for Direct Entry students after 1 year credit (Metropolitan 58%, Urban/Rural 52% and Remote 53%) and for Direct Entry students after 2 years credit (Metropolitan 78%, Urban/Rural 76% and Remote 74%). It should be noted, however, that the regional differences reduced in magnitude as the students gained more experience at UVIC.

For Total Direct Entry students, Cariboo had the highest degree completion rate at UVIC (43%), while Douglas, Fraser Valley and New Caledonia had the lovest rates (22%, 22% and 23% respectively). For Direct Entry students after 1 year credit, Capilano had the highest completion with 66%, while Douglas and New Caledonia had the lovest rates (39% and 44% respectively).

Finally, moving on to Table 3C Part I (SFU), it can be seen that the patterns for College Transfer students at SFU were different from those seen at the other two universities. There was a LOWER completion rate for College Transfers with 2 years credit (48%) than for those with 1 year credit (50%). Also, College Transfer students from the Urban/Rural colleges did not have the highest completion rates. At SFU it was the Metropolitan colleges which had the higher rates. College Transfers with 1 year credit from the Metropolitan colleges had a rate of 52% compared to 41% Urban/Rural and 40% Remote. For College Transfers with 2 years credit, the Metropolitan colleges had 54% compared to 39% Urban/Rural and 31% Remote.

While Okanagan had the highest rates at UBC and UVIC, it had one of the lover completion rates at SFU (26% for College Transfers with 1 year credit and 41% for those with 2 years credit). And, while Vancouver and Camosun had low completion rates at UBC and UVIC, they had some of the higher rates at SFU (52% and 57% respectively for College Transfers with 1 year credit and 55% and 61% for those with 2 years credit). Perhaps this general pattern indicates that the better, more persistent or more committed students from Okanagan College selected UBC and UVIC rather than SFU, and the better, more persistent or more committed students from Vancouver and Camosun selected SFU rather than either UBC or UVIC.

For Direct Entry students at SFU (Table 3C Part II), the regional pattern was also different than that observed at the other two universities. Metropolitan regions did not always have the highest completion rates. For Total Direct Entry students at SFU, the Metropolitan region was highest at 27% (compared to 24% Urban/Rural and 17% Remote). However, for Direct Entry students after 1 year credit, the Urban/Rural regions were highest with 54% (compared to 51% Metropolitan and 48% Remote). Finally, for Direct Entry students after 2 years credit, the Remote regions had the highest completion rates with 81% (compared to 75% Urban/Rural and 67% Metropolitan).

While most SFU patterns differed from the other two universities, there were three patterns for SFU which were consistent with them. There were lower completion rates for Total Direct Entry students compared to Total College Transfers (29% compared to 43%); higher completion rates for Direct Entry students after 1 year compared to College Transfers with 1 year credit (53% and 50% respectively); and higher completion rates for Direct Entry students after 2 years credit compared to College Transfers with 2 years credit (70% and 48% respectively).

This common pattern can be clearly seen in Figure VIII on the next page which summarizes the average degree completion rates for all three universities. It can also be seen that the rates for UVIC and SFU were similar to each other for all student groups except the College Transfer students with 2 years credit. In this case, the completion rate at SFU was much lover than at UVIC. For all six groups shown, the completion rates at UBC were substantially higher than at the other two universities. The reasons for such differences among the universities are not known.

Figure VIII
AVERAGE DEGREE COMPLETION RATES
1977 - 1979 COHORTS

	COLLEGE TRANSFERS			DIRECT ENTRY		
UNIVERSITY	TOTAL	WITH 1 YR CREDIT	WITH 2 YR CREDIT	TOTAL	AFTER 1 YR CREDIT	AFTER 2 YR CREDIT
UBC	66%	64%	76%	56%	72%	84%
UVIC	50%	50%	66%	35%	56%	77%
SFU	43%	50%	48%	29%	53%	70%

5.2 ENROLMENT STATUS BY FACULTY OF ENTRY (TABLE 4)

Table 4, in Appendix A, shows the variations in university degree completion rates which occurred among faculties. Table 4A deals with students at UBC, Table 4B deals with students at UVIC and Table 4C deals with students at SFU. Part I of the table reports on College Transfers while Part II covers Direct Entry students.

Starting with Table 4A Part I (UBC), it can be observed that there were relatively small numbers of College Transfer students in most of the faculties at UBC. This makes it difficult to draw meaningful comparisons. However, it generally appears that degree completion rates for College Transfers with 1 year credit were lower in Arts (58%) and higher in Dental Hygiene (95%) and Elementary Education (88%) compared with those attained in other faculties. Similarly, for College Transfers with 2 years credit the completion rates were lower in Arts (70%) and higher in Music (97%) and Social Work (89%).

For Direct Entry students at UBC (Table 4A Part II) there were very low degree completion rates for the NITE faculty (Native Indian Teacher Education). The rates were only 6% for Total Direct Entry, 17% after 1 year credit, and 33% after 2 years credit. This was possibly because completion of a degree was not required of the earlier cohorts in order to obtain a teaching certificate.

Other faculties with low degree completion rates for Direct Entry students at UBC included Agriculture (41% Total, 57% after 1 year credit, and 76% after 2 years credit) and Arts (52% Total, 69% after 1 year credit, and 83% after 2 years credit). The faculties with the highest completion rates at UBC were Medicine (all 100%), Law (95% Total, 100% after 1 and 2 years credit), Applied Science (78% Total and 100% after 1 and 2 years credit) and Nursing (68% Total, 85% after 1 year credit and 95% after 2 years credit).

For College Transfers at UVIC (Table 4B Part I), it can be seen that degree completion rates were relatively high in the Faculty of Human and Social Development (80%) for those with 1 year credit and relatively low in the Education faculty (33%) for those with 2 years credit. The low value in

Education may again be caused by the earlier cohorts being able to obtain a teaching certificate without having to complete a university degree. This situation has since changed at UVIC; a degree is now required in order to get a teaching certificate. For Direct Entry students at UVIC (Table 4B Part II) there was little variation in degree completion rates by faculty.

From Table 4C Part I it can be seen that the lowest completion rates at SFU were in Education (35% for College Transfers with 1 year credit and 26% for those with 2 years credit). In Table 4C Part II the same pattern existed for Direct Entry students at SFU. Education had the lowest completion rates with 20% Total, 38% after 1 year credit, and 52% after 2 years credit. Again, these low Education rates may be the result of students being able to obtain their teaching certificates without having to complete a degree.

5.3 ENROLMENT STATUS BY ENTRY YEAR LEVEL (TABLE 5)

Table 5, in Appendix A, shows the enrolment status of students according to their Entry Year Level. One might have expected all College Transfer students with 1 year university equivalent credit to have been at a second year entry level and all College Transfer students with 2 years credit to have been at a third year level. Similarly, one might have expected all Direct Entry students to have been at a first year level. This was not the case.

From Table 5A Part I it can be seen that some College Transfer students with 1 year university equivalent credit at UBC were initially registered at a first year university level. Perhaps this indicates that some of their advance credit was not transferable to the particular program attempted at UBC. Some of the other students were registered at a third year level. Perhaps these were students who had transferred with 25 or 26 units (i.e., just less than the 27 units technically needed to achieve 3rd year) and they were allowed to enter third year since they were so close to the limit.

A similar cross-over of entry year levels occurred for College Transfers with 2 years credit at UBC. It also occurred for both groups of College Transfers at UVIC (Table 5B Part I) and at SFU (Table 5C Part I). At SFU, however, the majority of College Transfer students with 2 years credit were listed as having entered at a second year level rather than the third year level.

From Table 5A Part II it can be seen that a similar pattern occurred for Direct Entry students. Although UBC indicated that these students had entered the university with no university equivalent credit attained prior to admission, approximately 5% of the students were registered into a university year level higher than first year. A similar situation existed at UVIC (Table 5B Part II), but there were only 0.5% of the Direct Entry students labelled as higher than first year. At SFU (Table 5C Part II) there were no students so labelled.

5.4 ENROLMENT STATUS BY SEX (TABLE 6)

Table 6, in Appendix A, provides an analysis of the current enrolment status of students by sex. At UBC (Table 6A) there was very little difference in degree completion rates for males and females. This was true for all groups of College

Transfers and Direct Entry students.

At UVIC (Table 6B), however, males had slightly higher completion rates for College Transfer students with 1 year credit (52% males and 48% females). They also had slightly higher rates for Direct Entry students after 1 year credit (57% males and 54% females) and for Direct Entry students after 2 years credit (78% males and 76% females). For College Transfers with 2 years credit the males had substantially higher rates (75% males compared to 59% females).

At SFU (Table 6C), for both College Transfer groups males had substantially higher completion rates than females (54% compared to 44% for College Transfers with 1 year credit and 56% compared to 43% for College Transfers with 2 years credit). However, for Direct Entry students (including all three groups of Direct Entry students) a reverse pattern was evident. Females had slightly higher degree completion rates than males.

CHAPTER 6

STUDENTS' GPA UPON ENTRY TO UNIVERSITY

6.1 ENROLMENT STATUS COMPARED TO GPA UPON ENTRY (TABLE 7)

Table 7, in Appendix A, was prepared to explore whether variations in university degree completion rates could be explained by differences in students' grade point averages Upon Entry to the university.

From Table 7A (Part I) it can be observed that there was a strong positive relationship between GPA Upon Entry and degree completion rates. For College Transfer students with 1 year credit and for College Transfers with 2 years credit, those who entered UBC with high GPA's had higher completion rates than those who entered with low GPA's. For example, College Transfers with 1 year credit who had a GPA Upon Entry to UBC of 3.8 or more achieved a completion rate of 84%, while those with a GPA of 2.6 - 3.1 had only 64% completion. Similar positive relationships were evident for Total Direct Entry students, and for Direct Entry students after 1 or 2 years credit (Table 7A Part II).

Less than 30% of the College Transfers with 1 year credit at UBC completed a degree if they entered with a GPA of 1.9 or less. For College Transfers with 2 years credit the corresponding completion rate was 49%. For Direct Entry students who entered with a High School GPA of 1.9 or less, only 15% completed a degree.

Unfortunately, GPA's Upon Entry to UVIC were not available for College Transfer students (Table 7B Part I). However, High School GPA's were available for approximately 80% of the Direct Entry students at UVIC (Table 7B Part II), except for the 1977 cohort. A similar strong positive relationship existed between degree completion rates at UVIC and High School GPA Upon Entry to UVIC. Completion rates were higher for those who entered with a high GPA than those having a low GPA. The degree completion rate was only 21% for Direct Entry students with a GPA Upon Entry of 2.0 - 2.5. Only one student had a GPA Upon Entry of less than 2.0.

As in the case of UVIC, there was no GPA Upon Entry information available for College Transfer students at SFU (Table 7C Part I). However, High School GPA's were available for approximately 77% of the Direct Entry students at SFU (Table 7C Part II). While there was still a positive relationship between High School GPA and degree completion rates for Direct Entry students at SFU, as there was at both UBC and UVIC, the relationship was weaker. For example, Direct Entry students after 2 years credit who had a High School GPA of 3.8 or more achieved 70% completion while those with a GPA of 2.0 - 2.5 achieved 60% completion, and

those with a GPA of 1.9 or less had 64% completion (although very few students were involved in this latter group).

Since High School GPA information was not available for College Transfer students at any of the universities, it was not possible to examine whether the higher completion rates for Direct Entry students, compared to College Transfers, were related to differences in the students' academic standings following Grade 12. Given the strong relationships observed between GPA Upon Entry and degree completion, it is important for such analyses to be extended so that they are based on High School GPA's for <u>both</u> groups of students.

CHAPTER 7

WITHDRAWAL RATES

7.1 AVERAGE WITHDRAWAL RATES (TABLE 8)

Table 8, in Appendix A, examines withdraval rates at the end of 1 year, 2 years, and 3 years of study at the universities. Since students who withdrev at the end of one year may have subsequently re-enrolled, the net or Cumulative Total withdraval rate at the end of three years was usually less than the sum of the three annual figures. These yearly figures and the 3-year Cumulative Total withdraval rate are all examined in Table 8.

The totals at the bottom of the Table 8 are summarized as average withdraval rates* in Figure IX on the next page. From this Figure it can observed that higher percentages of College Transfers with 1 year credit withdrev each successive year at UBC than for College Transfers with 2 years credit. This same pattern vas evident at UVIC. Hovever, at SFU the withdraval rates for College Transfers with 1 years credit were LOWER than for those with 2 years credit.

For College Transfers with 1 year credit at UBC the 3-year Cumulative Total withdraval rate was 31%, while for those with 2 years credit it was 24%. For UVIC the figures were 46% and 32% respectively, considerably higher than for UBC, but still following the same pattern. For SFU the corresponding figures followed a reverse pattern at 40% and 47% respectively.

For Total Direct Entry students, the withdraval rates were always higher than for Total College Transfers, at all three universities. Hovever, for Direct Entry students after they had attained 1 or 2 years credit, the withdraval rates were substantially lover than for College Transfers with 1 or 2 years credit. This held true at all three universities.

Comparing Total Direct Entry withdraval rates with those for Direct Entry students after 1 year credit, it appears that most of the students who withdrev after one year at university were students who had not successfully completed one year's credit. For example, the withdraval rate after one year at UBC was 28% for Total Direct Entry but only 6% for those who had attained 1 year credit. At UVIC the corresponding figures were 38% and 8% respectively, while at SFU they were 31% and 4%.

---

*Note: withdraval rate comparisons have been made on the basis of an average of the withdraval rates reported for the 1977, 1978 and 1979 cohorts.

Figure IX
AVERAGE WITHDRAWAL RATES
1977 - 1979 COHORTS

	COLLEGE TRANSFERS			DIRECT ENTRY		
	TOTAL	WITH 1 YR CREDIT	WITH 2 YR CREDIT	TOTAL	AFTER 1 YR CREDIT	AFTER 2 YR CREDIT
UBC AFTER:						
1 YR	26%	26%	19%	28%	6%	7%
2 YR	11%	12%	9%	14%	17%	8%
3 YR	4%	4%	3%	6%	8%	7%
CUM.TOT.	32%	31%	24%	40%	21%	10%
UVIC AFTER:						
1 YR	34%	34%	27%	38%	8%	8%
2 YR	15%	14%	11%	20%	25%	8%
3 YR	6%	7%	2%	7%	11%	9%
CUM.TOT.	46%	46%	32%	57%	33%	12%
SFU AFTER:						
1 YR	27%	21%	34%	31%	4%	2%
2 YR	18%	17%	19%	19%	12%	4%
3 YR	8%	8%	4%	8%	11%	4%
CUM.TOT.	45%	40%	47%	53%	21%	5%

A similar pattern held true after two years. Most of the withdravals at the end of two years at university were students who had not successfully completed the 2 years credit. The second year withdraval rate at UBC was 17% for Direct Entry students after 1 year credit but only 8% for Direct Entry students who had attained 2 years credit. At UVIC the corresponding figures were 25% and 8% respectively, while at SFU they were 12% and 4%.

7.2 WITHDRAWAL RATES BY FACULTY OF ENTRY (TABLE 8)

Table 8, in Appendix A, also shows withdraval rates by the students' faculty of entry. This includes withdraval rates at the end of 1 year, 2 years, and 3 years of study, as well as the 3-year Cumulative Total withdraval rate.

Examining the 3-year Cumulative Total withdraval rates by faculty, it can be seen from Table 8A Part I (UBC) that Industrial Education had the highest withdraval rates for College Transfer students with 1 year credit (73%), although this was based on a fairly small number of students. Dental Hygiene, Elementary Education, and Applied Science had the lovest withdraval rates at 4%, 16% and 19% respectively. Most withdravals in all faculties occurred after one year at university.

For Direct Entry students at UBC (Table 8A Part II) there was a similar pattern by faculty. Cumulative Total withdraval rates for Industrial Education (95%), Occasional Education (91%) and Native Indian Teacher Education (74%) were very high. Most Direct Entry students in these faculties did not continue beyond one year in the program. Medicine, Law and Applied Science had the lowest withdraval rates at 0%, 5% and 22% respectively.

Turning to Table 8B Part I, the withdraval pattern at UVIC was much more erratic than at UBC. Fine Arts had the highest 3-year Cumulative Total withdraval rate (58%) for College Transfers with 1 year credit but the lowest rate (6%) for those with 2 years credit. Education had a 61% withdraval for the 1977 cohort of College Transfers with 1 year credit but only a 23% for the 1978 cohort. Similarly, the 1977 and 1978 cohorts of College Transfers with 2 years credit in Education had 71% and 73% withdraval rates respectively but the 1979 cohort had a rate of only 36%.

The withdraval rates for Direct Entry students at UVIC were much more stable (Table 8B Part II). For each group of Direct Entry students, there was not much variation in withdraval rates among the four main UVIC faculties.

At SFU (Table 8C Part I) the highest withdraval rates occurred in the Education faculty for both College Transfers and Direct Entry students. There was not much variation in withdraval rates among the other SFU faculties.

One additional pattern was evident from Table 8. At UBC, the withdraval rates after 1 year in Arts, Commerce, Nursing, and Applied Science for College Transfers with 1 year credit were less for more recent cohorts than for earlier cohorts (Table 8A Part I). For example, the 1983 and 1984 cohorts in Arts had one year withdraval rates of only 25% and 26% respectively, whereas the rates for the 1977 and 1978 cohorts were 31% each. The same pattern of decreasing withdraval rates was also evident in Arts & Science and Human & Social Development at UVIC for College Transfers with 1 year credit. However, it was NOT evident in any of the faculties at SFU.

The pattern of decreasing withdraval rates after 1 year at university was also NOT true for Direct Entry students at UBC. However, it was evident for Total Direct Entry students in Arts & Science and Education at UVIC and in Education at SFU.

CHAPTER 8

DEGREES AND DEGREE MAJORS OBTAINED

8.1 DEGREE COMPLETION BY FINAL DEGREE OBTAINED (TABLE 9)

Table 9, in Appendix A, shows the specific degrees which were completed by the different cohorts of students at the three universities. In Figure X, on the next page, these percentages are summarized for the most frequently occurring degrees.

From Figure X it can be seen that B.Sc. and B.A.Sc. degrees were more frequent among Direct Entry students than College Transfer students, while B.Ed. degrees were more frequent among the College Transfers. This was true for all three universities. In addition, at SFU there was a higher percentage of Direct Entry students completing B.B.A. degrees than College Transfers.

8.2 DEGREE COMPLETION BY FINAL DEGREE MAJOR OBTAINED (TABLE 10)

In Table 10, of Appendix A, the students who completed degrees are tabulated according to the areas in which they specialized. There was a tremendous array of different subjects and most occurred with similar frequency. Those which had a slightly greater incidence at UBC were Biology, Civil Engineering, Computer Science, Electrical Engineering, English, Forest Resource Management, Geography, History, Mechanical Engineering, Political Science and Psychology.

At UVIC (Table 10B), the majors which occurred slightly more frequently were Biology, Child Care, Computer Science, Economics, English, Geography, History, Physics, Political Science, Psychology, Sociology and Visual Arts.

At SFU (Table 10C), the majors which occurred more frequently were Biological Science, Business, Business/Economics, Computing/Mathematics, Criminology, English, History, Geography and Psychology.

At all three universities, the incidence of Computer Science majors among College Transfer students was lower than for Direct Entry students. Similarly the incidence of Psychology majors was higher for College Transfers than for Direct Entry students.

Figure X
DEGREES COMPLETED MOST FREQUENTLY*
1977 - 1979 COHORTS

B.Sc.	7%	6%	6%	19%	19%	19%

* Note: Figures shown are frequency percentages.
For example, 71% of all degrees awarded to College Transfer students at SFU were B.A. degrees.

CHAPTER 9

FINAL ACADEMIC STANDINGS

9.1 DEGREE COMPLETION BY FINAL ACADEMIC STANDING (TABLE 11)

Table 11, in Appendix A, shows the final academic standing of the students who completed degrees.

From Table 11A it can be seen that there were few differences at UBC between the distribution of final grades achieved by College Transfers with 2 years credit compared to those with only 1 year credit. Only the category "Other" showed any sizable difference, with fewer College Transfers with 2 years credit being assigned to this category.

For Direct Entry students at UBC, there were slightly higher percentages obtaining 1st class standings and lower percentages with Pass standings than observed for College Transfers.

The distribution of grades for College Transfer students at UVIC (Table 11B) was quite erratic from cohort to cohort, compared to that observed for Direct Entry students at UVIC. Other than this, there didn't appear to be much difference between the two groups in the percentages of 1st class standings and Pass standings achieved.

Finally in Table 11C the final academic standings for students at SFU are shown. Substantially higher percentages of College Transfers with 2 years credit had 1st class standings (18%) compared to those with only 1 year credit (9%). There was a corresponding lower percentage of Pass standings. The percentages of Direct Entry students who had 1st class standings (10%) and 2nd class standings (68%) were slightly higher than for College Transfers with 1 year credit but not as high as the College Transfers with 2 years credit.
